SUMMARY

Software engineer with 7+ years of experience building platform and infrastructure tooling at scale, most recently leading a company-wide Scala-to-TypeScript migration at Asana and driving developer-tooling adoption across engineering teams. Background spans backend services and LLM frameworks at Asana, alongside mobile and growth engineering at Meta.

EXPERIENCE

Senior Software Engineer, Asana — March 2022 – November 2025

- Led the migration of Asana's server-side query layer from Scala to TypeScript, driving adoption from 44% to 88% of newly written queries within two quarters and to roughly half of all queries (800+, new and existing) within the year
- Designed and rolled out a scalable code structure pattern (adopted across all product teams) that eliminated circular dependencies and monolithic files, aligning stakeholders and shipping the guidance, lint rules, and automated codemods
- Built an in-app developer debugging tool (React/TypeScript) that grew into a platform adopted by 2 other engineers, and used ~200 times in a single quarter.
- Led the migration of an internal multi-provider LLM framework (Claude, ChatGPT, Gemini) onto Vercel's AI SDK, migrating the majority of Claude traffic amid Asana's company-wide push into AI features
- Mentored an engineer into her first workstream leadership role and organized two cross-team feedback initiatives (24 and 29 engineers) that shaped platform roadmap decisions

Software Engineer, Meta (Facebook) — February 2017 – October 2020

- De facto tech lead for a 4-person team on the Facebook Lite interface, coordinating with growth, quality, and product stakeholders across Seattle, London, and Tel Aviv offices
- Executed a full rewrite of zero-rating app logic serving 200M+ MAU, preserving app performance and growth metrics throughout the transition
- Served as one of the primary engineers overhauling a mobile network operator integration (Android/Java, PHP Hack) to meet new security and privacy compliance requirements, while preserving account-access benefits for tens of millions of MAU
- Drove multi-million MAU acquisition and retention gains for users on limited data plans in emerging markets as part of Facebook Connectivity

EDUCATION

University of California, Berkeley — BA Computer Science, 2017

SKILLS

- Proficient in: TypeScript, Java, Scala, Python, Git/Mercurial, React
- Experience in: PHP/Hack, SQL, Android, Kubernetes, Bazel
